repetitive C-terminus of RNA polymerase II. Catalytic component of MPF (By similarity)
                                                                                                               tyrosine phosphate.
SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature oocytes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

-!- PATHWAY: Amino-acid biosynthesis; L-lysine biosynthesis via DAP pathway; tetrahydrodipicolinate from L-aspartate: step 4.
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: Belongs to the dihydrodipicolinate reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: Belongs to the dihydrodipicolinate reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "The complete genome sequence of Chromobacterium violaceum reveals remarkable and exploitable bacterial adaptability."; Proc. Natl. Acad. Sci. U.S.A. 100:11660-11665(2003).
-!- CATALYTIC ACTIVITY: 2,3,4,5-terrahydrodipicolinate + NAD(P)(+) 2,3-dihydrodipicolinate + NAD(P)H.
                                                                                                                                                                                           Bacteria, Proteobacteria, Betaproteobacteria, Neisseriales,

Microbiol. 4:799-808 (2002).

-!- CATALYTIC ACTIVITY: 2,3,4,5-terrahydrodipicolinate + NAD(P)(+) = 2,3-dihydrodipicolinate + NAD(?)H.
-!- PATHWAY: Amino-acid biosynthesis; L-lysine biosynthesis via DAP pathway; tetrahydrodipicolinate from L-aspartate: step 4.
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: Belongs to the dihydrodipicolinate reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                             Tumor antigen peptides which induce tumor-specific cytotoxic T-cells and polynucleotides encoding them for treatment of cancer.
                                                                                                                                                                                                                                                                                                                 The present invention relates to peptides which are partial sequences of sto/lck family proteins. The present sequence is one such peptide. The peptides are useful for producing vaccines for the treatment of cancer, including colon cancer and small-cell lung cancer.
                                                                                                                                          Src protein; lck protein; vaccine; colon cancer; small-cell lung cancer.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consists of (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is ouseful for generating antibodies against it, detecting or quantitating a colypoptide in tissue, as molecular weight markers and as a food cusplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders convolving aberrant protein expression or biological activity. The diagnostics, forensics, gene mapping, identification of mutations of capportice and polymucleotide sequences have applications in diagnostic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this captent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oncogene; cancer; cytostatic; neoplasm; hck tyrosine kinase; enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human oncogene screening method-related HCK kinase domain protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for screening an oncogene. The method comprises producing a cDNA library for a fusion DNA, comprising a cDNA region of TEL connected downstream of a vector promoter, introducing the PVT region of TEL connected downstream of a vector promoter, introducing the produced cDNA library into a host cell, expressing the fusion DNA, selecting the transformed cells and analyzing the base sequence of the fusion DNA in the transformed cells and analyzing the base sequence of the fusion DNA in the transformed cells, and thus identifying the fusion DNA as an oncogene. TEL is a transcription factor which belongs to the Ets family and is known to form various genes and fusion genes via a chromosomal translocation in cancer cells, such as cocurs in some cases of leukemia. The method of the invention may be useful for screening a substance which suppresses the proliferative property of a cancer cell, screening a substance which inhibits the activity of a kinase gene introduced into the cell and screening a substance for the treatment of cancer. The current sequence is that of the human HCK kinase domain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                            Screening oncogene, by producing cDNA library having fusion DNA comprising cDNA encoding PNT region of TEL connected to downstream of promoter, introducing library into host cell, expressing fusion DNA and selecting transformed cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prediction; secondary structure, alignment; evolutionary conservation; homology; periodicity; co-variation analysis; antigenic site; site directed mutagenesis; interaction.

Sequences AAY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the

The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TNF receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the LCK tyrosine kinase protein. This sequence is used to illustrate the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Designing a ligand binding to a target molecule, comprises identifying amplecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; protein co-ordinate data; Lymphocyte Cell Kinase; Lck; enzyme;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as interaction of a protein with other molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                             Prediction; secondary structure, alignment; evolutionary conservation; homology; periodicity; co-variation analysis; antigenic site; site directed mutagenesis; interaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                       The present invention relates to a crystalline polypeptide (1), comprising the catalytic domain of human Lymphocyte Cell Kinase (Lck) protein. Lck is a Src-family protein tyrosine kinase expressed primarily in T-cells and plays an essential role in immune response. (1) is useful for identifying a compound which is an inhibitor of human Lck protein. The present sequence is a mutated fragment of the human Lck sequence, which approximately comprises the catalytic domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "Wild-type D substituted with N. New crystalline polypeptide comprising ligand binding domain or catalytic domain of Lck protein, for determining three-dimensional structure of catalytic domain of Lck, has predetermined unit cell parameters.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a crystalline polypeptide (I), comprising the catalytic domain of human Lymphocyte Cell Kinase (Lck) protein. Lck is a Src-family protein tyrosine kinase expressed primarily in T-cells and plays an essential role in immune response. (I) is useful for identifying a compound which is an inhibitor of human Lck protein. The present sequence is a mutated fragment of the human Lck sequence, which approximately comprises the catalytic domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                        Loew

                                                                                                                                                          The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TNF receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the HCK tyrosine kinase protein. This sequence is used to illustrate the method of
                                                      Designing a ligand binding to a target molecule, comprises identifying molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and

Novel isolated binding pocket of receptor tyrosine kinase that regulates the kinase domain of the receptor, useful for identifying modulator of the receptor for treating lymphoproliferative conditions.

WPI; 2002-643365/69

The invention relates to an isolated binding pocket (I) of a receptor tyrosine kinase (RTK) that regulates the kinase domain of RTK. A crystal (II) comprising a binding pocket of an RTK that regulates the kinase

cc domain of the RTK, or comprising a juxtamembrane region and/or kinase comain of an RTK or its part, or formed by a juxtamembrane region and a cc domain of an RTK in an autoinhibited state and a model (III) of (I) made using (I); are useful for determining the secondary and/or tertiary structure of a polypeptide, or for screening for a ligand capable of binding to a binding pocket and/or inhibiting or enhancing the atomic contacts of interactions in a binding pocket. (I) is useful for identifying a modulator of an RTK. (II) is useful for designing, identifying, evaluating and/or synthesizing mimeries of binding pocket, or ligands that associate with the binding pocket, to binding pocket, or ligands that associate with the binding pocket, to pulpaptides with unknown structures. Pharmaceutical compositions comprising the ligand or modulator is useful for treating polypeptides with unknown structures. Pharmaceutical compositions (such as cancer), arthritis, inflammation, autoimmune disorder (such as cancer), arthritis, inflammation, graft versus host disease, atthritis), viral infection, inflammation, graft versus host disease, contendegenerative diseases and conditions involving traum and injury to the nervous system (e.g., Altheimer's disease, Parkinson's disease. Huntington's disease and multiple sclerosis). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a new kinase scaffold library comprises at least 1 set of compounds, each set comprising at least 1 N-heterocyclic compound of formulae (I)-(VII) given in the specification. Catalytic domain of PIM kinase-like protein Src-2.

Kinase; protein co-ordinate data; protein structure; cancer; cytostatic; neoplasm; inflammation; antiinflammatory.

The invention relates to a new kinase scaffold library comprises at least compounds, each set comprising at least 1 N-heterocyclic compound of formulae (1) - (VII) given in the specification. Also included are a system for fitting compounds in binding sites of protein kinases (comprising an electronic kinase scaffold, and a scaffold library is comprising at least 1 collection of electronic representations of (I) - (VII), where the scaffold library is embedded in a computer device and the electronic representations of the compounds can be selectively certieved and functionally connected with computer software adapted to fit electronic representations of compounds in an electronic representations of compounds in an electronic representation of a binding site of a kinase, obtaining improved ligands binding to a protein kinase (which comprises determining if a derivative of (I) - (VII) binds to the kinase with greater affinity and/or specificity than (I) - (VII), developing ligands specific for a particular kinase than (I) - (VIII), developing ligands binding to a kinase (which comprises than (I) - (VIII), developing ligands binding to a kinase (which comprises than (I) - (VIII) that binds to a kinase (which comprises). developing ligands with increased specificity on a kinase (which comprises testing a derivative of a kinase binding compound (1)-(VII) for increased specificity on the kinase), identifying a ligand binding to a kinase (which comprises determining if a derivative compound (1)-(VII) for specificity, a co-crystal of a kinase and a binding compound (1)-(VII) preparation of co-crystals of a kinase and a binding compound (1)-(VII), preparation of co-crystals of a kinase and a binding compound (1)-(VII), preparation of co-crystals of pin-1 with (1)-(VII), identifying potential kinase binding compounds (which comprises fitting compound (1)-(VII) in an electronic representation of co-crystals of a kinase binding site), attaching a kinase binding compound (1)-(VII) and attachment of the component on a kinase binding compound (1)-(VIII) and attachment of the component on a kinase binding compound (1)-(VIII) and attachment of the component on a kinase binding compound (1)-(VIII) and attachment of the component on a kinase binding compound (1)-(VIII) and attachment at the allowed site), modified compounds (comprising (1)-(VIII) binds comprising conserved residues matching at least on of pin-1 residues 49, 52, 67, 121, 128 and 186 which comprises determining if (1)-(VIII) binds conserved residues matching at least on of pin-1 residues 49, 52, 67, 121, 128 and 186 which comprises determining if (1)-(VIII) binds conserved residues matching at least on of pin-1 residues 49, 52, 67, 121, 128 and 186 which comprises determining if (1)-(VIII) binds conserved residues at order receptor, endethelial growth factor endethelial growth factor endet kinases, for modulating kinase activity and for treating disease condition associated with abnormal kinase activity e.g. cancer, inflammatory disease. The method identifies improved ligands binding to a kinase resulting in ligands having high affinity and specificity towards kinase. The co-crystals of kinase and the binding compound are of sufficient size and quality to allow structural determination of at least in co-crystals with the kinase, identifying chemical structures of the scaffolds, that, when modified, change the binding affinity and/or specificity between the scaffold and kinase and synthesizing a ligand in which at least I chemical structure of the scaffold is modified), New scaffold library used for identifying and developing ligands for protein kinases and treating kinase associated disorders e.g. cancer, comprises set of compounds comprising N-heterocyclic compounds. expression such as cancers (e.g. Imphoma, melanoma and cancers of the breast lung and prostate), autoimmune/inflammatory disorders (e.g. AIDS, asthma and diabetes mellitus), and reproductive defects (e.g. AIDS, asthma and diabetes mellitus), and reproductive defects (e.g. AIDS, antatility, ovulatory defects, endometriosis and polycystic ovary syndrome). The DNA may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of FKH by expressing inactive proteins or to supplement the patients own production of PKH polypeptides. Additionally, the DNA may be used to produce PKH, according to standard recombinant DNA methodology, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. Conversely, antisense nucleic acid molecules may be administered to down regulate PKH expression. The DNA, and antisense and quantitate the presence of similar nucleic acid assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and ence which patients may be in need of restorative therapy. They may also be used as DNA probes in diagnostic acid sequences in samples, and ence which patients may be in need of restorative therapy. They may also be used to study the expression and function of PKH polypeptides and their production of antibodies against PKH and in assays to identify modulators (agonists and antagonists) of PKH expression and activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anti-PKH antibodies and PKH antagonists may also be used to down regulate PKH expression and activity. The anti-PKH antibodies may also be used as diagnostic agents for detecting the presence of PKH polypeptides in
                                                                                                                                                                                                                                                     This sequence represents a human protein kinase homolog (PKH) of the invention. The PKH sequences may be used in the prevention, treatment an diagnosis of diseases associated with inappropriate PKH expression such
                                                                                                                                                                                                                                                                                                                                                  as cancers, autoimmune/inflammatory disorders and reproductive defects.
They may be used to treat disorders associated with decreased PKH
                                                             Nucleic acids encoding a human protein kinase homolog useful for preventing, diagnosing and treating cancer, autoimmune/inflammatory disorders and reproductive defects.
                                                                                                                                                                                    Claim 1; Col 47-50; 38pp; English

prevention, diagnosis and treatment of diseases associated with increased or decreased expression of PKH. Examples of such disorders include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and liver cancer), syndrome (AIDS), anaemia, asthma, Crohn's disease and multiple sclerosis) and reproductive disorders (e.g. tubal disease, ectopic pregnancy and polycystic ovary syndrome). PKH, its catallytic or immunosenic fragment screening techniques. PKH nucleic acids are used to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hybridisation probes useful in mapping the naturally occurring genomic sequences. PKH are also used as antigens in the production of antibodies against protein kinases (PK) and in assays to identify modulators of PK expression and activity. PKH is also used in protein therapy
                                                                                                                                                                                                                                                                                   Human protein kinase proteins and homologs, useful for preventing, diagnosing and treating cancers, autoimmune/inflammatory disorders and
                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is human protein kinase homolog-3 (PKH-3). Human protein kinase homologs (PKH) and their cDNA molecules are used in the

Human protein kinase homologue from clone 507669. ABB84435 standard; protein; 346 AA. (first entry) 08-NOV-2002 ABB84435; RESULT 17 ABB84435

Protein kinase homologue, PKH, cytostatic; immunosuppressive, antifungal, antiinflammatory; antiallergic; antiasthmatic; antianaemic; antidiabetic; antiarteriosclerotic; antithyroid; dermatological; nephrotropic; human; antigout; thyromimetic; nootropic; osteopathic; antiarthritic; allergy; antirheumatic; ophthalmological; antiulcer; antiviral; antibacterial; antiprotozoal; antiparasitic; antihelmintic; ankylosing spondylitis; acquired immunodeficiency syndrome; AIDS; Addison's disease; amyloidosis; dermatomyositis, diabetes mellitus, emphysema, atrophic gastritis, gout, glomerulonephritis, Goodpasture's syndrome; Graves' disease, psoriasis, Hashimoto's Lhyroiditis, hypereosinophilia; irritable bowel syndrome; multiple sclerosis; myasthenia gravis; myocardial inflammation; uveitis; pericardial inflammation; osteoarthritis; osteoporosis; pancreatitis; adult respiratory distress syndrome; anaemia; asthma; atherosclerosis; autoimmune haemolytic anaemia; autoimmune thyroiditis; bronchitis; cholecystitis; contact dermatitis; Crohn's disease; atopic dermatitis;

(INCY-) INCYTE PHARM INC Bandman O, Gorgone GA, cancer.

Sjogren's syndrome; systemic lupus erythematosus; systemic sclerosis; thrombocytopenic purpurs; ulcerative colitis; Werner syndrome; infection; haemodialysis; extracorporeal circulation; infertility; tubal disease; ovulatory defect; endometriosis; oestrous; menstrual cycle; gene therapy; uterine fibroid; autoimmune disorder; polycystic ovary syndrome; enzyme; ovarian hyperstimulation syndrome; ectopic pregnancy; teratogenesis; polymyositis; Reiter's syndrome; rheumatoid arthritis; scleroderma; SLE; 30-MAY-2001; 2001US-00870962. 98US-00173581. 99US-00420915. US2002081290-A1. Homo sapiens. 15-OCT-1998; 20-OCT-1999; 27-JUN-2002

Nucleic acids encoding a human protein kinase homolog useful for preventing, diagnosing and treating cancer, autoimmune/inflammatory preventing, diagnosing and treating disorders and reproductive defects. Hillman JL, Y, Lu DAM; Tang YT, Azimzai 2002-655433/70 N-PSDB; ABQ76288.

Claim 47; Page 27; 43pp; English.

This invention describes a novel protein kinase homologue (PKH)

contiallergic, antiasthmatic, antianeamic, antiarterisoslerotic,
antiallergic, antiasthmatic, antianeamic, antiarterisoslerotic,
antiallergic, antiasthmatic, antianeamic, antiarterisoslerotic,
antiallergic, antiasthmatic, antianeamic, antiantentic,
contributoric, dermatological, antidabetic, nephrotropic, antipuloct,
thyromimetic, nootropic, osteopathic, antiarthritic, antirheumatic,
thyromimetic, nootropic, osteopathic, antibacterial, antifungal,
antiprotozoal, antiparasitic and antihelmintic activity. The polypeptide
control control propertied and polypeptide is used to screen for
agonists and antagonists of PKH which can also be used in disease
creamen. The polypeptide and polymetheotide are used for treating
caquired immunodeficiency syndrome (AIDS), Addison's disease, adult
respiratory distress syndrome, allergies, ankylosing spondylitis,
amyloidosis, anaemia, asthma, atherosclerosis, autoimmune haemolytic
contact dermatitis, Crohn's disease, allergies, ankylosing spondylitis,
contact dermatitis, crohn's disease, atopic dermaticis, dermatomyositis,
diabbetes mellitus, emphysema, atrophic gastritis, glomerulonephritis,
contact dermatitis, myocardial or pericardial inflammation,
hypereosinophilia, irritable bowel syndrome, multiple sclerosis,
hypereosinophilia, irritable bowel syndrome, solymopsitis,
creaner, haemodalalysis, and extraoorporasis, plymyositis, psoriasis,
cancer, haemodalalysis, and extraoorporasic collections, viral, bacterial,
cancer, haemodalalysis, and extraoorporasis, plymyositis, infertility,
cancer, haemodalalysis, and extraoorporasis, and endometriosis,
cancer, haemodalalysis, and extraoorporasis, and endometriosis,
cancer, haemodalalysis, and extraoorporasis, and endometriosis,
cancer, haemodalalysis, and extraoorporasis,
cancer, haemodalalysis, and extraoorporasis,
cancer, haemodalalysis, and extraoorporasis,
conlocated the menstrinal polymore propreserion produces of the poestrous cycle, disruptions of hemography in par polycystic ovary syndrome, ovarian hyperstimulation syndrome, endometrial and ovarian tumours, uterine fibroids, autoimmune disorders, ectopic pregnancies, and teratogenesis. The polypeptides of the invention can be used for gene therapy. This sequence represents a PKH from clone ID 507669 isolated from TML3DTO2, a library constructed using RNA isolated from non-adherent peripheral blood monounclear cells collected from a pool of male and female donors

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnost a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine avtoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, dastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp collections caused by virus, bacteria, fungi or parasite. The dithp collections also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as equence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these

                                                                                                                                                                                                                                                                                                                                                                                                                                                            ed polypeptide - has amino acid sequence of beta-galactosidase with a gene conjugated to the N-terminal via DNA having multi-cloning site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence consists of the N-terminal amino acids of the beta-galactosidase gene fused with the lck gene. It is produced by E.coli transformed with a recombinant vector (see AAQ13981). It is useful for producing an antibody specifically immunoreactive with only a lck genederived polypeptide in T cells. The antibody may recognise lck gene-

The present sequence represents a human kinase and phosphatase protein designated KPP-34. Human KPP sequences have cytostatic, anticonvulsant, nootropic, neuroprotective, carticonvulsant, nootropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic, antinflammatory and thyromannetic activities, and can be used in gene therapy. The human KPP polypeptides and polymucleotides of the invention are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. proliferative (e.g. cancer, atherosclerosis), neurological (e.g. proliferative (e.g. disease, stroke), immune/inflammatory (e.g. AIDS, epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP sequences or their fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polymptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

```
The invention discloses isolated human nucleic acid alternative splicing variants that are all tumour-involved genes (TIGS). The nucleic acids and polypeptides are useful for determining the level of a nucleic acid or polypeptide are useful for determining the level of a nucleic acid or polypeptide sequence in a biological sample, for determining the level or or polypeptide sequence in a biological sample, for determining the level of variant sequence in a first biological sample and the level of the original sequence in a first biological sample and for raising antibodies. A pharmaceutical composition comprising a carrier and the nucleic acid, is useful for treating diseases (e.g. cancer) that can be ameliorated or cured by increasing or decreasing the level of the encoded protein. The nucleic carding acids are also useful for diagnostic purposes, especially for detecting cancer or a predisposition to cancer, for evaluating the state or carding pharmaceuticals, for distinguishing various stages in the life cycle of the same type of cells which may be helpful for the development of physiological function of the original TiG, in targeting or development for determining mutations in tumour-involved genes and in gene therapy. The polypeptides are useful for identifying compounds capable of binding to the variant produce and modulating its activity and for modulating endothelial differentiation and proliferation, as well as to modulating employed either avivo or in vivo. The sequences presented in condulating employed either avivo or in vivo. The sequences presented in the proprosis either avivo or in vivo. The sequences presented in the proprosis either avivo or in vivo. The sequences presented in the proprosis either avivo or in vivo. The sequences presented in the proprosis either avivo or in vivo. The sequences presented in the proprosis either avivo or in vivo.

The invention relates to a novel method for screening an oncogene. The method comprises producing a cDNA library for a fusion DNA, comprising a cDNA encoding the PNT region of TEL connected downstream of a vector promoter, introducing the produced cDNA library into a host cell.

Expressing the fusion DNA, selecting the transformed cells and analyzing the bease sequence of the fusion DNA in the transformed cells and analyzing dentifying the fusion DNA as an oncogene. TEL is a transcription factor which belongs to the Ets family and is known to form various genes and custon bear and chromosomal translocation in cancer cells, such as coccurs in some cases of leukemia. The method of the invention may be useful for screening a substance which suppresses the proliferative cuseful for screening a substance which suppresses the proliferative activity of a kinase gene introduced into the cell and screening a substance for the treatment of cancer. The current sequence is that of the human transcription factor TEL-ECO-RI adapter-HCK kinase (residues 1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Screening oncogene, by producing cDNA library having fusion DNA comprising cDNA encoding PNT region of TEL connected to downstream of promoter, introducing library into host cell, expressing fusion DNA and selecting transformed cells.
                                                                                                                                                                                                oncogene; cancer; cytostatic; neoplasm; TEL; transcription factor; fusion protein; hck tyrosine kinase; enzyme.
                                                                                                                                                         Human transcription factor TEL-Eco-RI-HCK kinase fusion protein 6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       227) fusion protein of the invention.

Claim 1; SEQ ID NO 1; 424pp; English.

The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, agonists and antegonists are useful for dagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease and inflammatory disorders such as Crohn's disease and diabetee mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the polymucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy procedures. The current sequence is that of the human KPP protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated NOVX polypeptide. A polypeptide of the invention has cytostatic, antidiabetic, anorectic, CNS-gen., cardiovascular-gen., and antiinflammatory activity. A polymucleotide encoding a polypeptide of the invention may have a use in gene therapy, and antisense therapy. The methods and compositions of the present invention are ugeful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence represents a NOVX polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polypeptides (NOVX) and nucleic acid molecules useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                           Guo X;

The invention relates to a novel method for screening an oncogene. The method comprises producing a cDNA library for a fusion DNA, comprising a cDNA encoding the PWT region of TEL connected downstream of a vector promoter, introducing the produced cDNA library into a host cell, cxpressing the fusion DNA selecting the transformed cells and analyzing the base sequence of the fusion DNA in the transformed cell, and thus cidentifying the fusion DNA in the transformed cell, and thus the base sequence of the fusion DNA in the transformed cell, and thus confirmed to the Ets family and is known to form various genes and fusion genes via a chromosomal translocation in cancer cells, such as coccurs in some cases of lenkemia. The method of the invention may be useful for screening a substance which suppresses the proliferative property of a kinase gene introduced into the cell and screening a cubstance for the treatment of cancer. The current sequence is that of the human transcription fearcor Tells. Eco-RI adapter-HCK kinase (residues 1-200) fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for screening an oncogene. The method comprises producing a CDNA library for a fusion DNA, comprising a CDNA region of TEL connected downstream of a vector connected downstream of a vector promoter, introducing the produced CDNA library into a host cell, cap a sequence of the fusion DNA, selecting the transformed cells and analyzing the base sequence of the fusion DNA in the transformed cell, and thus identifying the fusion DNA as an oncogene. TEL is a transcription factor which belongs to the Ets family and is known to form various genes and fusion genes via a chromosomal translocation in cancer cells, such as cocurs in some cases of leukemia. The method of the invention may be useful for screening a substance which inhibits the property of a cancer cell, screening a substance which inhibits the activity of a kinase gene introduced into the cell and screening a cubstance for the treatment of cancer. The current sequence is that of the human transcription factor TEL-Eco-RI adapter-HCK kinase (residues 1-6194) fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                             Screening oncogene, by producing cDNA library having fusion DNA comprising cDNA encoding PNT region of TEL connected to downstream of promoter, introducing library into host cell, expressing fusion DNA and selecting transformed cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to new isolated cancer-associated nucleic acid and polypeptide sequences. Also included are the following: a host cell comprising the recombinant nucleic acid or expression vector; an expendinant nucleic acid or expression vector; an expendinant nucleic acid comprising at least 10 contiguous nucleotides of the sequence given in the specification; an isolated polypeptide encoded within an open reading frame of a CA sequence; an isolated antibody or its antigen is binding frame of a CA sequence; an isolated antibody or its antigen control antibody; a kit for detecting cancer cells comprising the attribody; a kit for disposing the presence of cancer in a test sample, comprising at least one polynucleotide that selectively hybridizes to a CA polynucleotide sequence; a method for detecting a presence or an absence of cancer cells in an individual; an electronic library comprising the polynucleotide or polypeptide sequence; or its fragment comprising the polynucleotide or polypeptide sequence; or its complement; a method of screening for anticancer activity; a method for accenting for a bloactive agent capable of modularing the cativity of a CA protein (CAP), where the CAP is encoded by the nucleic actid sequence given in the specification; a method for diagnosing cancer; and a method for inhibiting expression of a cancer associated (CA) gene in a cell comprises contacting a cancer casociated (CA) gene in a cell comprises contacting a sequence cancer associated (CA) gene in a cell comprises contacting a cell expression of a cancer associated (CA) gene in a cell comprises contacting a sequence cancer associated (CA) gene in a cell comprises contacting a sequence cancer associated (CA) gene in a cell comprises contacting a sequence cancer cancer associated (CA) gene in a cell comprises contacting a sequence cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer cancer canc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hybridizing to a cancer associated (CA) mRNA corresponding to the polymucleotide sequences given in the specification, in an amount sufficient to elicit RNA interference and inhibiting expression of the CAP as the cell. The double stranded RNA is provided by introducing a short interfering RNA (siRNA) into the cell by transfection, electroporation or microinjection. The double stranded RNA is provided by introducing a short interfering RNA (siRNA) into the cell by an expression vector. The polymucleotides are useful in preparing a composition for diagnoshing or treating cancer. The presents acher-associated protein of the invention. Note: This sequence is not shown in the specification but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                       New cancer-associated (CA) polynucleotide comprising at least 10 contiguous nucleotides, useful in preparing a composition for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAB99332
```

New antisense oligonucleotides targeted to nucleic acids encoding hematopoietic cell protein tyrosine kinase, useful for diagnosing treating cancer (e.g. leukemia), inflammation, diabetes or viral

infections

                                                                                                          WO200132869-A1.
                                                                                       Homo sapiens.
                                                                                                                                                                       29-OCT-1999;
                                                                                                                                                                                                                                                                        transduction
                                                                                                                               10-MAY-2001
                                                                     anticancer
```

```
ö
The present invention describes a protein, designated HSB-1, which binds to human tyrosine kinase Hck. Also described are: (1) nucleic acids encoding the protein and its derivatives; (2) recombinant vectors containing the nucleic acids; and (3) host cells transformed by the vectors and expressing the protein. HSB-1 has cytostatic activity, binds tyrosine kinase, enhances tumour necrosis factor alpha and promotes apoptosis. HSB-1 proteins are used for the elucidation of the mechanism of Hck signal transduction and of the role of Hck in human immunodeficiency virus (HIV) infection. They can be used for the transfunct of infections and other diseases with which Hck is associated. They promote the anticancer activity of tumour necrosis factor alpha. The present sequence represents the human tyrosine kinase Hck protein, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Human haematopoietic cell tyrosine kinase protein.

Haematopoietic cell; tyrosine kinase; hyperproliferative disorder; cancer; therapy; inflammation; diabetes; viral infection; inflammation; tumour; cytostatic; virucide; antisense therapy; human; enzyme.

Homo sapiens.

US2003125275-A1

```
The invention relates to a compound targetted to a nucleic acid molecule encoding haematopoietic cell protein tyrosine kinase. The compound inhibits the expression of haematopoietic cell protein tyrosine kinase and it specifically hybridises with the nucleic acid molecule encoding the tyrosine kinase or with at least an 8-nucleobase portion of an active site on the nucleic acid molecule encoding the tyrosine kinase. The antisense compounds are useful for mcdulating the expression of haematopoietic cell protein tyrosine kinase and treating diseases or conditions associated with the expression of the tyrosine kinase, such as hyperproliferative disorders (e.g. cancer), inflammation, diabetes or a viral infection. The antisense compounds are also useful for diagnostics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            therapeutics, prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits and in distinguishing between functions of various members of a biological pathway. The present sequence is human haematopoietic cell tyrosine

protein-tyrosine kinase (BC 2.7.1.112) tkl (similarity) - chicken
N;Alternate names: kinase-related transforming protein (tkl); T-cell surface antigen ass
C;Species: Gallus gallus (chicken)
C;Daces: Gallus gallus (chicken)
C;Accession: A42126; A3939
R;Chow, L.M.; Ratcliffe, M.J.; Veilletre, A.
Mol. Cell. Biol. 12, 1226-1233, 1992
A;Title: tkl is the avian homolog of the mammalian lck tyrosine protein kinase gene.
A;Reference number: A42126; MUID:92186854; PMID:1545804
